

DVD's NOW AVAILABLE:

TRAUMATIC INJURIES OF THE PRIMARY TEETH (25 minutes)

ABSTRACT: Using patient's photos, radiographs, and case histories, various types of traumatic injuries and their treatment will be reviewed. Invulsions, dislocations, avulsions and other types of traumatic injuries will be discussed. Various radiographic techniques for hard and soft tissue injuries will be illustrated. The dark primary incisor and treatment of trauma to primary teeth will be discussed. Pulp therapies of traumatically injured teeth will also be reviewed.

TRAUMATIC INJURIES OF THE PERMANENT TEETH (22 minutes)

ABSTRACT: Using patient's photos, radiographs, and case histories, various types of traumatic injuries and their treatment will be reviewed. Invulsions, dislocations, avulsions and the Ellis Classification of traumatic injuries will be discussed. Various radiographic techniques for hard and soft tissue injuries will be illustrated. The protocol for reimplantation of permanent incisors, including various splinting mechanisms will be covered. Pulp therapies of traumatically injured teeth will also be reviewed. Re-attachment of fractured crowns will be illustrated and discussed. Various types of preventive measures will be discussed including sports mouthguards.

THE ERBIUM LASER: "THE 'STAR WARS' OF DENTISTRY" (34 MINUTES)

ABSTRACT: This course will teach the participant how lasers work and the different types of lasers used in dentistry. Clinical cases will be shown to compare the differences in hard tissue laser procedures versus the high-speed handpiece and air abrasion. Class I through V cavity preparations will be shown. Soft tissue cutting and coagulation techniques will be illustrated. The research on lasers in dentistry will be reviewed. Purchasing a laser, marketing, and return on investment will be discussed. A highlight of this course is the illustration of various hard and soft tissue surgical procedures.

SPACE MAINTAINERS MADE SIMPLE (18 Minutes)

ABSTRACT: In this course the participant will learn the rationale behind space maintenance in the mixed dentition stage of development. The participant will learn how to diagnose and decide which space maintainer would be best suited for the individual situation. Utilizing slides the participant will learn how to diagnose, treat, prescribe to the laboratory, and adjust both removable and fixed space maintainers.

ESTHETIC DENTISTRY FOR TOTS (60 minutes)

ABSTRACT: Today's parents demand the restoration of their children's teeth for function and esthetics. Self-image of our patients is very important. Glass ionomers, resinomers, composites, and various types of crowns will be illustrated on children. Esthetic facings for stainless steel crowns will be illustrated and chairside/laboratory steps necessary will be given. Treatment planning of these restorations will be taught, as well as the proper tooth preparation and steps necessary for esthetic, long-lasting restorations. Esthetic space maintainers will be shown and the participant will learn the ease with which these can be fabricated.

ESTHETIC DENTISTRY FOR TEENS (34 minutes)

ABSTRACT: Today's parents demand the restoration of their teen's teeth for function and esthetics. Self-image of our patients is very important. Enamel microabrasion, direct-bonded composite restorations and porcelain veneers will be illustrated that can be fabricated for our teenage patients. Use of various matrices for interproximal restorations will be discussed. A variety of bonding materials will be illustrated and compared. Bleaching methods will be discussed and the advantages and disadvantages of each explained.

These DVD's are professionally edited and prepared for optimum quality.
